Education

San Diego State University **May 2026**
Bachelor of Science in Computer Science *San Diego, CA*

Experience

Freelance Web Developer **Jun. 2026 – Jul. 2026**
Studio Avenue *Next.js, Sanity*

- Developed studioavenue.co using **Next.js** for a post-production studio whose credits include Marc Jacobs, Golden State Warriors, and BLACKPINK.
- Integrated **Sanity** as a headless CMS, separating website content management from the Next.js frontend.
- Enabled non-technical staff to publish and update site content through Sanity without editing application code.

Team Member **Jun. 2022 – Aug. 2026**
Chick-fil-A *San Diego, CA*

- Collaborated with team members to deliver efficient customer service in a fast-paced environment.

Projects

Yearning **Jun. 2026 – Sep. 2026**
iOS AI Conversation App *React Native, TypeScript, Convex*

- Built and published an AI conversation app using **React Native**, Expo, and **TypeScript** with a **Convex** backend; reached **66 registered accounts**.
- Implemented authenticated DeepSeek endpoints with **Zod**-validated structured responses, server-verified subscription tiers, and per-user/global rate limits to bound API usage.
- Built **on-device screenshot OCR** with message-position filtering and deduplication, converting extracted text into personalized LLM context without uploading source images.

Systems & Cloud Lab - UNIX System Administration **Jan. 2025 – May 2025**
San Diego State University Lab Projects *Kubernetes, Docker, Azure Cloud, Proxmox VE, NGINX*

- Configured **OpenBSD, Ubuntu, Solaris, and AIX** environments on Proxmox, including networking and DNS for communication between systems.
- Deployed containerized services using **Docker** and **Kubernetes** on **Azure**, with **NFS** storage and self-managed GitLab repositories.

Speech Emotion Recognition - Machine Learning **Jan. 2026 – May 2026**
San Diego State University Course Project *Python, Librosa, scikit-learn, NumPy, Matplotlib*

- Built a four-class SVM speech emotion classifier using Python and scikit-learn, extracting 13 MFCC features and RMS energy from **84 labeled RAVDESS audio clips** with Librosa.
- Achieved **76.2% accuracy** on a stratified 21-clip test set; evaluated precision, recall, F1 scores, and a confusion matrix to investigate classification errors.

IoT Water Boiling Monitor **Mar. 2026 – May 2026**
San Diego State University Wireless Networks Project *Arduino C++, OneWire, Wi-Fi, HTTP, ntfy*

- Built a Wi-Fi-connected temperature monitor that sampled a OneWire sensor every 10 seconds and transmitted readings over HTTP.
- Implemented boil-alert logic at **100°C** with duplicate-notification suppression and automatic re-arming below **95°C**.

Technical skills

Languages: TypeScript, JavaScript, Python, SQL, Java, C/C++
Frameworks: React, React Native (Expo), Next.js, Node.js, tRPC, TailwindCSS, Sanity
AI/ML & Backend: scikit-learn, Librosa, NumPy, Vercel AI SDK, DeepSeek, Convex, Drizzle ORM, Zod, MySQL
Hardware & Infrastructure: Arduino, Cloudflare Workers/R2, Docker, Kubernetes, Azure, CI/CD, Git
